

Quick Start

How to write a one-line “hello, world” program

1. Create the file hello.chpl:

```
writeln("hello, world");
```
2. Compile and run it:

```
> chpl hello.chpl
> ./a.out
hello, world
>
```

Comments

```
// single-line comment
/* multi-line
   comment */
```

Primitive Types

Type	Default size	Other sizes	Default init
bool	impl. dep.	8, 16, 32, 64	false
int	64	8, 16, 32	0
uint	64	8, 16, 32	0
real	64	32, 128	0.0
imag	64	32, 128	0.0i
complex	128	64, 256	0.0+0.0i
string	variable		" "

Variables, Constants and Configuration

```
var x: real = 3.14; variable of type real set to 3.14
var isSet: bool; variable of type bool set to false
var z = -2.0i; variable of type imag set to -2.0i
const epsilon: real = 0.01; runtime constant
param debug: bool = false; compile-time constant
config const n: int = 100; > ./a.out --n=4
config param d: int = 4; > chpl -sd=3 x.chpl
```

Modules

```
module M1 { code; } module definition
module M2 {
  use M1; module use
  proc main() { body(); } main definition
}
```

Expression Precedence and Associativity*

Operators	Uses
. () []	member access, call and index
new <i>(right)</i>	constructor call
:	cast
** <i>(right)</i>	exponentiation
reduce scan dmapped	reduction, scan, apply domain map
! ~ <i>(right)</i>	logical and bitwise negation
* / %	multiplication, division, modulus
<i>unary</i> + - <i>(right)</i>	positive identity, negation
+ -	addition, subtraction
<< >>	shift left, shift right
<= >= < >	ordered comparison
== !=	equality comparison
&	bitwise/logical and
^	bitwise/logical xor
 	bitwise/logical or
&&	short-circuiting logical and
 	short-circuiting logical or
..	range construction
in	loop expression
by #	range/domain stride and count
if forall [for sync single atomic	conditional, parallel iterator, serial iterator, synchronization types, atomic types
,	comma separated expression

*Left-associative except where indicated

Casts and coercions

```
var i: int = 2.0:int; cast real to int
var x: real = 2; coerce int to real
```

Conditional and Loop Expressions

```
var half = if i%2 then i/2+1 else i/2;
writeln(for i in 1..n do i**2);
```

Assignment and Swap

Simple Assignment: =
 Compound Assignments: += -= *= /= %= **=
 &= |= ^= &&= ||= <=> >=>
 Swap: <=>

Statements

```
if cond then stmt1(); else stmt2();
if cond { stmt1(); } else { stmt2(); }
```

```
select expr {
  when equiv1 do stmt1();
  when equiv2 { stmt2(); }
  otherwise stmt3();
}
```

```
type select actual {
  when type1 do stmt1();
  when type2 { stmt2(); }
  otherwise stmt3();
}
```

```
while condition do ...;
while condition { ... }
do { ... } while condition;
for index in aggregate do ...;
for index in aggregate { ... }
label outer for ...
break; or break outer;
continue; or continue outer;
```

Procedures

```
proc bar(r: real, i: imag): complex {
  var c: complex = r + i;
  return c;
}
proc foo(i) return i**2 + i + 1;
```

Formal Argument Intents

Intent	Semantics
in	copied in
out	copied out
inout	copied in and out
blank	formal arguments are constant except arrays, domains, syncs are passed by reference

Named Formal Arguments

```
proc foo(arg1: int, arg2: real) { ... }
foo(arg2=3.14, arg1=2);
```

Default Values for Formal Arguments

```
proc foo(arg1: int, arg2: real = 3.14);
foo(2);
```

Records

```
record Point { record definition
  var x, y: real; declaring fields
}
var p: Point; record instance
writeln(sqrt(p.x**2+p.y**2)); field accesses
p = new Point(1.0, 1.0); assignment
```

Classes

```
class Circle { class definition
  var p: Point; declaring fields
  var r: real;
}
var c = new Circle(r=2.0); class construction
proc Circle.area() method definition
  return 3.14159*r**2;
writeln(c.area()); method call
class Oval: Circle { inheritance
  var r2: real;
}
proc Oval.area() method override
  return 3.14159*r*r2;
delete c; free memory
c = new Oval(r=1.0,r2=2.0); polymorphism
writeln(c.area()); dynamic dispatch
```

Unions

```
union U { union definition
  var i: int; alternatives
  var r: real;
}
```

Tuples

```
var pair: (string, real); heterogeneous tuple
var coord: 2*int; homogeneous tuple
pair = ("one", 2.0); tuple assignment
(s, r) = pair; destructuring
coord(2) = 1; tuple indexing
```

Enumerated Types

```
enum day {sun,mon,tue,wed,thu,fri,sat};
var today: day = day.fri;
```

Ranges

```
var every: range = 0..n; range definition
var evens = every by 2; strided range
var R = evens # 5; counted range
var odds = evens align 1; aligned range
```

Domains and Arrays

```
var D: domain(1) = [1..n]; domain
var A: [D] real; array
var Set: domain(int); associative domain
Set += 3; add index to domain
var SD: sparse subdomain(D); sparse domain
```

Domain Maps

```
var B = new dmap(
  new Block([1..n])); block distribution
var D: domain(1) dmapped B; distributed domain
var A: [D] real; distributed array
var D2: domain(1) dmapped
  Block([1..n]); domain map sugar
```

Data Parallelism

```
forall i in D do A(i) = 1.0; domain iteration
[i in D] A(i) = 1.0; "
forall a in A do a = 1.0; array iteration
[a in A] a = 1.0; "
A = 1.0; array assignment
```

Reductions and Scans

Pre-defined: + * & | ^ && || min max
minloc maxloc

```
var sum = + reduce A; 1 2 3 => 6
var pre = + scan A; 1 2 3 => 1 3 6
var ml = minloc reduce (A, A.domain);
```

Iterators

```
iter squares(n: int) { serial iterator
  for i in 1..n do
    yield i**2; yield statement
}
for s in squares(n) do ...; iterate over iterator
```

Task Parallelism

```
begin task();
cobegin { task1(); task2(); }
coforall i in aggregate do task(i);
sync { begin task1(); begin task2(); }
serial condition do stmt();
```

Atomic Example

```
var count: atomic int;
if count.fetchAdd()==n-1 then
  done = true; nth task to arrive
```

Synchronization Examples

```
1) var data$: sync int;
data$ = produce1(); consume(data$);
data$ = produce2(); consume(data$);

2) var go$: single real;
go$=set(); use1(go$); use2(go$);
```

Locality

Built-in Constants:

```
config const numLocales: int; set via -nl
const LocaleSpace = [0..numLocales-1];
const Locales: [LocaleSpace] locale;
```

```
var c: Circle;
on Locales(i) { migrate task to new locale
  writeln(her.e.id);
  c = new Circle(); allocate class on locale
}
writeln(c.locale); query locale of class instance
on c do { ... } data-driven task migration
```
